

## AK40 SHELTER SYSTEM

The AK40 Shelter System (AK40-SS) is a family of MIL-SPEC shelters, each measuring 40 feet wide and 20 feet at its apex, and is available in any length.

All AK40-SS are specifically engineered to meet (65 mph wind load and 40 psf snow load) the stringent demands, environmental conditions and operational requirements for military operations throughout the world. Each shelter consist of a high-strength structural steel frame, heavy duty mil-spec cover system, insulating liners, complete electrical and lighting kit with internal panel box, two insulated end panels with hard door entries and center 15' X 15' equipment entries, two windows and two sets of ECU ports with electrical cable sleeve, and an optional exhaust system with flexible hose clamps.

The AK40-SS is a multi-functional shelter system which can meet large maintenance and warehousing requirements as well as MWR, Classroom, DFAC, RSOI and other operational shelter requirements while providing protection for military personnel, equipment and supplies in all types of climate, including extreme heat and cold.

Optional Equipment: Alaska 2.5 Ton, 5 Ton and 10 Ton Environmental Control Units, External Power Distribution Systems ranging from two to twelve PDP systems, as well as power generation units, are available for a complete turn key solution.
