

SAFE AND SECURE PROTECTION FROM CONTAMINATION

Batten-Supported Bund

From emergency leakage situations to semi-permanent fuel, chemical and decontamination situations the Structurflex Batten-Supported Bund is the ideal solution for containing harmful liquids and contamination effectively. The Structurflex Bund is easy to use, quick to deploy, lightweight and compact to store.

The Structurflex Bund has been designed to specifically contain leakage and spillage from rigid tanks, contain wash down liquids and decontamination, and provide safe permanent or temporary mobile storage of fuel and chemicals.

BATTEN-SUPPORTED BUND

Specifications

Sizes are manufactured to customer's requirements.
Standard depth is 300mm.
Available with battens on all four sides (standard) or with soft ends for easy vehicle access, refer to photos below.

Standard Equipment

Supplied in a ground sheet carry bag with setup instructions. The ground sheet is designed to protect the bund when deployed on rough surfaces.

Key Benefits:

- HF-welded construction for superior strength
- Manufactured in chemical and abrasion-resistant XR5 or PVC for less harmful chemicals
- Wall support stays can be internal or external
- Walls can be quickly collapsed to allow vehicle entry into bund
- Quick single-person deployment
- Self-erecting walls for rapid vehicle entry if required

The Structurflex Batten-Supported Bund with self-erecting soft ends for efficient vehicle entry and exit.
