

Oil spill packages for boats

Vikoma has been manufacturing oil spill equipment for over 50 years and has developed world leading packages ideally suited to boats. We offer a full range of equipment to contain, recover and store oil from a spill. Systems can be supplied in convenient containers which can be customised to meet your requirements.

We offer a range of oil containment boom systems which can be containerised to fit conveniently on the deck of a boat for easy deployment.

Our booms are made from neoprene rubber or polyurethane. Neoprene is strong flexible and durable but lightweight for excellent buoyancy and easy handling. Suitable for extreme weather conditions, a very durable fabric giving a long life. Polyurethane is a flexible, cost effective solution suited to many applications. Our booms come in range of lengths and sizes and are usually supplied on a reel of 200m to 300m and can be deployed directly from the container.

ISO and offshore specifications are available.

Containerised neoprene Hi Sprint oil containment boom system on a boat

We also offer sweep systems where a sweep arm is attached to the boat with options to work together with an oil boom to contain the oil.

The oil can then be recovered using a stand alone oil skimmer, such as one in our Komara range, or skimmers can be built as integrated parts of the oil containment boom as seen in our unique weir boom system or our Vikoskim module. The Vikoma weir boom system is the world's largest integrated containment and recovery system.

Sweep arm attached to a neoprene containment boom

The Komara range of skimmers are world renowned for superior performance, reliability and versatility and are suited to many applications including offshore, ports, harbours and rivers.

Our discs will recover 98% oil content for lighter to medium oil or a brush for thicker oils. For maximum flexibility choose our Duplex option for interchangeable disc and brush heads. Our disc skimmers collect just 2% water which minimises storage requirements for the recovered oil. For medium to heavy oil our Star Disc Maxi recovers high volumes quickly and efficiently.
